

The Non-GMO Project offers North America's only third party verification for products made according to rigorous best practices for GMO avoidance.

The brands listed in this shopping guide have enrolled products in the Non-GMO Project's Product Verification Program. Some of these products have been "verified" as meeting the Non-GMO Project Standard, and some are in the process of becoming verified.

New products are being enrolled and verified all the time. For more details, and for the most current enrollment listing, please visit www.nongmoproject.org

Current as of 9/1/10

GMOs (or "genetically modified organisms") are organisms that have been created through the gene splicing techniques of biotechnology (also called genetic engineering, or GE). This relatively new science typically merges DNA from different species, creating combinations of plant, animal, bacteria and viral genes that cannot occur in nature or in traditional crossbreeding. Virtually all commercial GMOs are bred to withstand direct application of herbicide and/or to produce an insecticide. None of the GMO traits currently on the market offer increased yield, drought tolerance, enhanced nutrition, or any other consumer benefit. Studies, meanwhile, increasingly show a correlation between consumption of GMOs and an array of health risks.

We support your right to choose safe, healthy non-GMO food & products.

Brought to you by the Non-GMO Project

A non-profit coalition committed to providing clearly labeled and independently verified non-GMO choices

Protecting your right to know what's in your food.

AVOIDING GMO RISK INGREDIENTS

The following crops carry risk of being genetically modified, because GMO varieties are commercially produced in North America and certain other parts of the world, or because there are known instances of contamination. These crops may not be used in Non-GMO Project approved products unless verified as compliant with the Non-GMO Project Standard:

Canola, Corn, Cotton, Flax, Papaya, Rice (from China, starting in 2010), **Soy, Sugar Beets, Zucchini and Yellow Summer Squash.**

Ingredients derived from these risk crops include: Amino Acids, Aspartame, Ascorbic Acid, Sodium Ascorbate, Vitamin C, Citric Acid, Sodium Citrate, Ethanol, Flavorings ("natural" and "artificial"), Hydrolyzed Vegetable Protein, Lactic Acid, Maltodextrins, Microbial growth media, Molasses, Monosodium Glutamate, Sucrose, Textured Vegetable Protein (TVP), Xanthan Gum, Vitamins, Yeast Products.

Animal derivatives such as milk, meat, eggs, honey and other bee products, are also considered high-risk by the Non-GMO Project Standard, because of potential GMO contamination in feed and other inputs.

If a product contains any of the above items, your strongest assurance that the manufacturer has followed best practices for GMO avoidance is for the product to be "Non-GMO Project Verified." Other non-GMO claims are based on individual brands' internal standards and self-evaluation. Non-GMO Project claims, on the other hand, are backed by independent, third party audits to a transparent, consensus-based Standard.

For more information on GMOs, the Non-GMO Project, or the Standard we use to verify products, please visit www.nongmoproject.org

NON-GMO PROJECT VERIFIED BRANDS

The following brands have products that are VERIFIED as compliant with the Non-GMO Project Standard. The number of verified products is indicated in parentheses after each brand name. For a detailed listing of product names, please see www.nongmoproject.org. Also, watch for the Non-GMO Project Verified seal!
